

1 The Polish validation study included 28 data from bi- and multilingual families. Though it  
2 is a small group, we decided to explore their correlation coefficients (non-parametric  
3 Spearman's rho) and found these were similar to those found for Polish monolingual  
4 children (see Table 1 in Supplementary Materials). *NOTE:* Here is an Issue for commenting  
5 on Supplementary Materials. Since the correlation coefficients were similar in both groups,  
6 and as the bi- and multilingual group was too small to warrant a separate analysis, we  
7 decided to include them in the Polish dataset alongside the Polish monolinguals.

Table 1

*Supplementary Material: Table S1 - Spearman's correlations for monolingual and multilingual children in the Polish dataset*

| lang_group   | r    | n  | correlation                                  |
|--------------|------|----|----------------------------------------------|
| monolingual  | 0.92 | 85 | Ability from CDI-CAT ~ full CDI score        |
| multilingual | 0.90 | 28 | Ability from CDI-CAT ~ full CDI score        |
| monolingual  | 0.92 | 85 | Ability from CDI-CAT ~ ability from full CDI |
| multilingual | 0.90 | 28 | Ability from CDI-CAT ~ ability from full CDI |
| monolingual  | 1.00 | 85 | Ability from full CDI ~ full CDI score       |
| multilingual | 1.00 | 28 | Ability from full CDI ~ full CDI score       |
